

RSVAWARENESS.CA

Protect Your Health

Respiratory Syncytial Virus (RSV) is a highly contagious virus that can cause health complications in older adults.

Who is at risk?

- Adults 65 years of age and older
- Older adults with weakened immune systems
- Older adults in residences or long-term care

Prevention

Vaccination is available for the prevention of RSV in older adults.

Who is eligible?

Publicly-funded RSV vaccination programs vary between provinces and territories.

Talk with your healthcare provider to schedule your RSV vaccination.

RSV VACCINATION PROTECTS YOU SO YOU CAN KEEP DOING WHAT YOU LOVE.
